

FRONT FORK SPRING KIT

FOR KAWASAKI VN2000

⚠ WARNING!

It is advisable to have an Öhlins dealer install the springs. Consult your vehicle service manual when installing this product.

1 Put the motorcycle on a workstand so that the front wheel barely touches the ground.

⚠ WARNING!

Make sure that the vehicle is securely supported so that it will not tip.

2 Remove the:

- headlight top cover (3)
- headlight rim and lens, as a unit (4)
- inner bracket (5)
- turn signal assembly (6)
- headlight side panels (7)

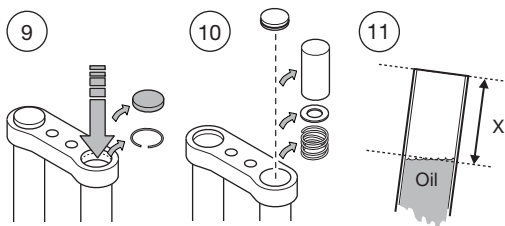

8 Loosen the handle bar (by removing the handle bar clamps) and fold it gently backwards so it will rest on the fuel tank. Use a blanket to protect the finish.

9 Remove the fork leg (rubber) caps. Press down the top cap while removing the circlip.

10 Remove the original spacer, washer and spring.
*Note! You will **not** need the original spacer, washer or spring for the installation of the Öhlins front fork spring.*

11 Check the oil level (when no springs are installed with the front fork fully compressed) and the quality of the oil.

Recommended oil level: 200 mm

12 Install the Öhlins spring (smallest diameter at the bottom), spacer (if any; two options here below), top cap (with the front fork fully extended) and finally the circlip.

Standard ride height	25mm lowered ride height
Fork leg cap	Fork leg cap
Circlip	Circlip
Top cap	Top cap
Install Spacer	No spacer!
Spring	Spring

13 Install all removed parts as before the installation!
